

Multi Gigabit LiFi

pureLiFi can offer world leading multi-gigabit LiFi capabilities, enabling a high speed, low latency 5 Gbps LiFi connections. These connections offer the potential for new consumer and enterprise applications that have faster, more reliable performance in real world settings than RF technologies.

The technology is ready for evaluation and promises to deliver unprecedented speeds, ultra-low latency, military grade security and reliability.

For more information on LiFi technology and our ecosystem of LiFi products visit www.pureLiFi.com or get in touch info@pureLiFi.com

High Speed & Low Latency

High speed connectivity with massive capacity that outperforms WiFi in real world environments. LiFi provides ultra-low latency offering a better user experience.

Limitless Applications

Our multi-gigabit LiFi can enable a range of applications, including eliminating cables from soundbars, TVs, set-top-boxes, and enabling ultra-fast gaming, and more immersive AR.

Military Grade Security

pureLiFi's access points provide military grade security with very low probability of detection interception and not susceptible to jamming.

No Congestion & Interference

LiFi provides better real-world performance than RF technologies as it does not suffer from congestion and interference. Providing a better user experience.
