

# SkyLite

pureLiFi's game changing LiFi concept SkyLite is a whole-room filling access point that covers over 50 sqm (540sq. feet) of space, flooding the room with high speed, low latency and highly secure wireless connectivity accessible to all. This system is compatible with the latest global LiFi standard IEEE 802.11bb.

## Performance Highlights

Total max capacity	750 Mbps / AP UL 750 Mbps / AP DL
Number of users	multi-user
Coverage Area	55sqm

## High Speed & Low Latency

High speed connectivity with massive capacity that outperforms WiFi in real world environments. LiFi provides ultra-low latency offering a better user experience.

## Room Filling LiFi

A single Access Point will flood an entire room with high performance, very high-capacity, invisible LiFi connectivity.

## Military Grade Security

pureLiFi's access points provide military grade security with very low probability of detection interception and not susceptible to jamming.

## No Congestion & Interference

LiFi provides better real-world performance than RF technologies as it does not suffer from congestion or interference. Providing a better user experience.
